

# Imprivata Mobile Device Access

Healthcare's leading authentication solution delivers fast, secure access to Spectralink Versity smart phones and clinical applications

## Key benefits

- Improve workflow by enabling fast, secure access via single sign-on authentication
- Increase clinician satisfaction by enabling providers to focus more time on patient care
- Improve security and auditing of PHI
- Unlock the full potential of Spectralink Versity smartphones by streamlining access and integration to clinical mobile applications and removing barriers to adoption

Integrated for use on Spectralink Versity smartphones, Imprivata Mobile Device Access is healthcare's only mobile authentication solution that enables fast, secure access to clinical mobile devices and applications.

Clinicians are becoming increasingly mobile, moving throughout the hospital as they care for patients. As a result, the use of mobile devices continues to increase as organizations bring new technologies to the bedside. Enterprise-owned, purpose-built devices such as the Spectralink Versity smartphone facilitate this mobility by supporting and enhancing critical workflows through patient identity management, clinical communications, lab collections, and other time-saving capabilities.

Imprivata Mobile Device Access streamlines the process by enabling fast, secure access to the Spectralink Versity devices. Users simply tap their proximity badge to unlock the device and then use single sign-on (SSO) authentication to access their supported applications. This removes the need to manually re-enter user names and passwords, saving clinicians' valuable time and effort. Imprivata Mobile Device Access also improves security and auditing by providing better visibility into user interactions with PHI.

## Fast, secure single sign-on to mobile applications

The repetitive, manual entry of usernames and passwords to access applications can result in hundreds or even thousands of hours of lost productivity over the course of a year.

Imprivata Mobile Device Access recoups this lost productivity by enabling SSO for mobile applications, which streamlines clinical workflows and gives providers more time to spend with their patients. Simplified access removes a potential barrier to adoption, allowing organizations to unlock the full potential of Spectralink Versity to enhance care at the bedside.

### About Imprivata

Imprivata, the healthcare IT security company, enables healthcare securely by establishing trust between people, technology, and information to address critical compliance and security challenges while improving productivity and the patient experience.

Nuremberg, Germany

The Hague, Netherlands

### Secure fast user switching

Imprivata Mobile Device Access enables secure, fast user switching. A simple badge tap allows caregivers to instantly log in or log out of the device, enhancing the benefits of the Versity smartphone in a shared device environment.

### Comprehensive monitoring and simplified reporting

Imprivata Mobile Device Access records all device and SSO-enabled application access events in a centralized database within a hardened virtual or physical appliance. The Imprivata appliance provides out-of-the-box reports that give administrators full visibility into access of Versity smartphones and enables rapid response to audit inquiries. This streamlines reporting for IT administrators and gives organizations better visibility into how, when, and where caregivers access and interact with patient health information on mobile devices.
